Melissa:

I need to see if you can answer the following questions:

1. K169 is listed for what contaminants? I think benzene only but not sure.
2. Can you treat away the K169 listing? I don't think you can but can you. Its my understanding that you can only treat away a characteristic listing.
3. When would the waste have to have been deposited to carry the K169 code? I assume, its the date of the listing, which I don't know,
4. If it was prior to the date to the development date of the K169 codes, do we revert to characteristic listings? I think you can treat a characteristic waste and it not be hazardous.

Thanks
